

Empowering
Contractors
to Build a
Better World

danaos-projects.com

DANAOS Projects Software Solutions (dp), part of DANAOS Technology Ecosystem, is an award-winning, high-end, Engineering & Construction (E&C) Software Provider that empowers Constructors, Engineering Consultants, Infrastructure Operators and Facility Management companies in order to stay competitive in a changing and volatile marketplace.

DANAOS Projects embraces the great company culture and the forward-looking vision of DANAOS; one of the largest maritime corporations in Europe and the Operational Excellence in Vertical Software and Customer Support of DANAOS Management Consultants; DANAOS Technology Conglomerate and Global Leader in Maritime Software Solutions.

Attaining DANAOS pedigree and mindset, **DANAOS Projects** is an international ConTech and PropTech Vertical Software Provider that pioneers in Digital Construction and FSM software, providing real answers to Cost Control and Resources optimization along with Field Service Management, Asset Management, Workforce Management, Ticketing and Project Documentation.

With an industry-specific mindset and a comprehensive experience, acquired from 20+ years of developing, customizing and setting up **ProjectVIEW ERP** and **DANAOS VORTEX FSM** around the world, we are true construction management software specialists.

Our Vision is to industrialize Construction & FSM processes so that Companies can operate efficiently as Master Planners, Contractors and Operators. Our Purpose -Our True North- is to become the One-and-Only Solutions Integrator that will standardize end-to-end, construction to operations, enhancing Projects Performance and increasing the assets' operational lifespan.

ProjectVIEW^{ERP}

Cost Monitoring Solution

More than 20 years ago, we envisioned a software that will align, unify, manage, standardize and control all construction activities and resources expended onsite along with engineering and administrative processes in the office. A comprehensive Commercial, Operational and Financial suite of modules for Vertical and Horizontal Construction that will bring real-time awareness, increase your projects' pipeline and control the Fixed-Price/LS contracting overruns, extending to complexity and high-risk of megaprojects such as: transportation works, large MEP, Build–Operate–Transfer (BOT) and Public–Private Partnership (PPP – P3s) infrastructure projects.

ProjectVIEW ERP is the industry's only enterprise-ready Cost Control and Projects Performance Management Platform. A complete business suite for Agile Construction. A Construction_OS that assists Contractors in estimating, bidding, executing and operating efficiently, Demarcating Uncertainty, Sizing the Risk and Securing the Profit.

You cannot rely only on a scheduling software to manage a project! (Rita Mulcahy's PMP® Exam Prep). Abandon legacy 'spaghetti systems' and spreadsheet misery, today! Wipe the slate clean and start using Project-VIEW ERP within few months.

The unified construction software platform that can be fully customized to your needs. The only solution that seamlessly integrates BoQ Code Lines with Oracle Primavera and any BIM system, providing real-time [Actual vs Budgeted Cost].

For information on ProjectVIEW ERP please contact:

We perceive Facility Management and Asset Maintenance Management as a conjunction of Workforce Mobility and Maintenance Management. One system that orchestrates Asset and Operations Performance Management. DANAOS VORTEX is a comprehensive Field Service and Asset Management Suite, a CAFM system, that includes 4 ecosystems: 1) Backoffice Operations, 2) Workforce/Mobile Operations, 3) Subcontractors and 4) Clients' Trouble Ticketing and Reporting.

DANAOS VORTEX's four ecosystems facilitate contract management with daily task optimization for the dispatcher, management of Client's preventive and corrective maintenance, assets management and workforce readiness whilst assuring Quality of Service for the end-Client.

DANAOS VORTEX integrated with GIS (spatial data infrastructure) and/or Building Automation – IoT systems is ideal for modern Infrastructure Operators and Capital Projects Concessionaires such as: Motorways Operators, Providers of Public Services or Airport Managers that require serviceability and restoration for extending the service-life of the Constructed Assets and high standards on Public Service Delivery Management, assuring safer and more reliable services to the end-users.

Beyond DANAOS VORTEX for Field Service Management, our offering can be bundled with DANAOS CRM, Commercial Management and Project Management, ideally suited for all types of engineering-technical services companies
